Home Front Signs Letter of Intent to Manufacture 1000 Homes in Buenos Aires Argentina

Buenos Aires Argentina: Home Front Technologies, the Argentine Company Licensed by Home Front Homes to manufacture the award winning energy efficient Eco friendly homes, has signed a letter of intent with the Sindicato de Trabajadores de la Carne (Meat Packers Union) to provide 1000 Homes using their innovative Home Building kits. The homes which are being built for union members will be constructed in several phases with the first 93 homes to be built in the Barrio Mercedes Province of Buenos Aires. Construction of this first phase is scheduled to commence this fall.

Alan Craig and Jerry Gillman, Directors of South American Development Corp and Home Front Homes congratulate Union Officials after the official signing.

Architectural Students Learn to Build With SIPS

Architectural students in Argentina recently attended a Home Front Homes technology seminar. Students were introduced to the Home Front Homes energy efficient panelized building system and SIPS Technology. Students

watched four men construct the home kit in four days.

SADC Completes Purchase of Home Front Homes, LLC in the USA

Jerry Gillman a director of South American Development Corporation (SADC) announced that they have purchased Home Front Homes LLC, a Structural Insulated Panel manufacturer located in Englewood Florida. Home Front Homes has manufactured energy efficient environmentally friendly Structural Insulated Panel homes (SIPS) for over ten years. The Home Front Homes “building system” products have won many building and environmental awards include one for innovation and another for its “Green Building System.” The company also won the 2008 Habitat for Humanity Aurora Award. Gillman stated he had been in the General Contracting business in Florida for over 30 years and considered the Home Front Homes System, “the Building System of the Future” for low cost energy efficient housing.

Alan Craig, president of SADC stated the manufacturing facility would be relocated to their facility in Hialeah Florida. Craig said the company would further the engineering and design to achieve a zero energy home and continue to develop the engineering for earth quake product certification.

In 2006, Art Nadel using a hedge fund Ponzi scheme ended up with the controlling interest in this innovative company when he agreed to invest millions of dollars in the “Green” panelized housing manufacturing Company. Nadel was later arrested on January 27, 2009 after disappearing with over 400 million dollars of his investor’s money. Home Front Homes, and many other companies controlled by Nadel were quickly placed in the hands of a court appointed receiver by the Securities and Exchange Commission (SEC). Home Front’s debts exceeded \$3 million when purchased by SADC. Craig said the only issue with Home Front was “Art Nadel”. We plan to remove the word “Nadel from Home Front Homes and re-launch the company in April and continue manufacturing award winning energy efficient green housing solutions.

World Peace Organization Attends Home Front Technology Seminar

Mr. Rodolfo Roade of the World Organization for Peace attended a recent Home Front Technology seminar in Buenos Aires Argentina. Mr. Roade stated that he was very impressed with the eco benefits of the Home Front product. "They are grinding up plastic bottles and making plastic wood to construct these homes instead of chopping down trees and filling up land fill sites with waste. In these times of Global warming, this is a very exciting product.
